DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11 December 2003 has been entered.

Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Nonelected claims 8-22 are cancelled.

Claim Rejections - 35 USC § 102--Withdrawn

1. Claims 1-7 were rejected under 35 U.S.C. 102(b) as being anticipated by United States Patent No. 5,750,287 to Kinoshita et al. (Kinoshita).

Art Unit: 1746

2. Applicant has distinguished the present claims over Kinoshita by amending the claims to clearly indicate that the claims differentiate between the electrode and the binder. Applicant has credibly asserted that Kinoshita describes the use of an equivalent to the thermoplastic xylene-formaldehyde resin for an electrode, and not a means for binding the hydrogen storage alloy particles to each other or with the substrate. Kinoshita is believed to be representative of the closest prior art.

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance. The present claims are drawn to an alkaline storage battery. The foregoing is to supplement the record. The present claims are believed to be allowable because of the recitation of an active material layer formed on the electrode substrate. The active material contains hydrogen storage alloy particles and thermoplastic xylene-formaldehyde resin. The general concept of using carbonaceous materials is not where the novelty of the present invention lies, rather the choice of the carbonaceous binder material, thermoplastic xylene-formaldehyde resin, and the operation binding the particles to the electrode (as opposed to *being* the electrode).

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
